SocialBot

Project Team:

1.) Vishwa Patel (Pennkey - vishwa)
2.) Ali Altaf (Pennkey – alialtaf)
3.) Hamza Qaiser (Pennkey – hamzaq)

General Idea:

SocialBot is a webapp that lets you be more social by scheduling tweets and facebook wallposts/statuses for a particular time and queue them too.

Specific goals:

- SocialBot will let you queue Facebook statuses and/or tweets by letting you specify after what time period should these be posted.

- SocialBot will also let you schedule messages that you would like to post on all your friend's walls for their birthday, their anniversary, New Year's, Christmas and all such celebratory events.

- SocialBot will also let you schedule tweets for certain days (similar to the facebook approach specified above)

- You can also use SocialBot to automatically reply to everyone who posted on your Facebook Wall for your birthday by posting a "Thank you!" or other such message.

Work split-up:

Front-end and Queuing – Vishwa

Schedule Facebook and Twitter tweets – Hamza

Automatically Replying – Ali

Packages and APIs to be used:

- Twitter API
- Facebook API
- Django or Flask (we need to decide this)
- JQuery
